# **SYMATECH LABS LIMITED**

COMPANY PROFILE

# Symatech Labs

## Background

Founded in the year 2015, we at Symatech Labs Limited believe great software solves great problems. Our software development journey started from humble beginnings to a point where we caught the attention of notable institutions like the **ILO** ( International Labour Organisation ), **Magical Kenya**, **Nairobi County Government** and other reputable companies.

## Vision

To make technology an extension of the human condition by innovating and considering all possible alternatives to significantly enhance your productivity

## Mission

To devote all our resources to ensure that technology becomes a solution to your day to day activities by creating superior products and services.

## Some of our esteemed clients

# Methodology

Agile development is our default methodology, it takes an iterative and adaptive approach to maximize the value of the solution in development. The methodology helps reduce the number of failures and allows us to scale on those failures. It also means that the customer gets to see the solution regularly and make any suggestions instantaneously as opposed to waiting until the project culminates.

# Security Statement

Security is paramount to your business and ours too. We always strive to ensure that we strategically incorporate the relevant security controls to help reduce your business risk. We are confident that the array of cyber security services we provide will go a long way in ensuring your business from exposure to threats.
